

“SUREJUST have been prominent in the Marine Industry for 25 years and have developed a range of calorifiers to the highest standard.”

The Super-Yacht range of Calorifiers has been exclusively designed for use by super yacht builders. The super efficient heat exchanger of copper finned tubing makes its recovery and heat up time extremely fast. These hand crafted calorifiers are designed to cope effortlessly with the high demands of a super yacht's luxurious equipment. Multiple showers, sizeable baths and Jacuzzi's can all be simultaneously run whilst maintaining en-suite facilities as required. In exceptionally large vessels a series of tanks can be fitted to allow even greater volumes of water and a quicker heating time.

Our calorifiers provide the complete domestic hot water systems for onboard use whatever the size of craft. The boiler is made of 100% copper, this gives both performance and health benefits. Copper has excellent anti-bacterial qualities. The SuperYacht range gives boat builders using our product a superior hot water system.

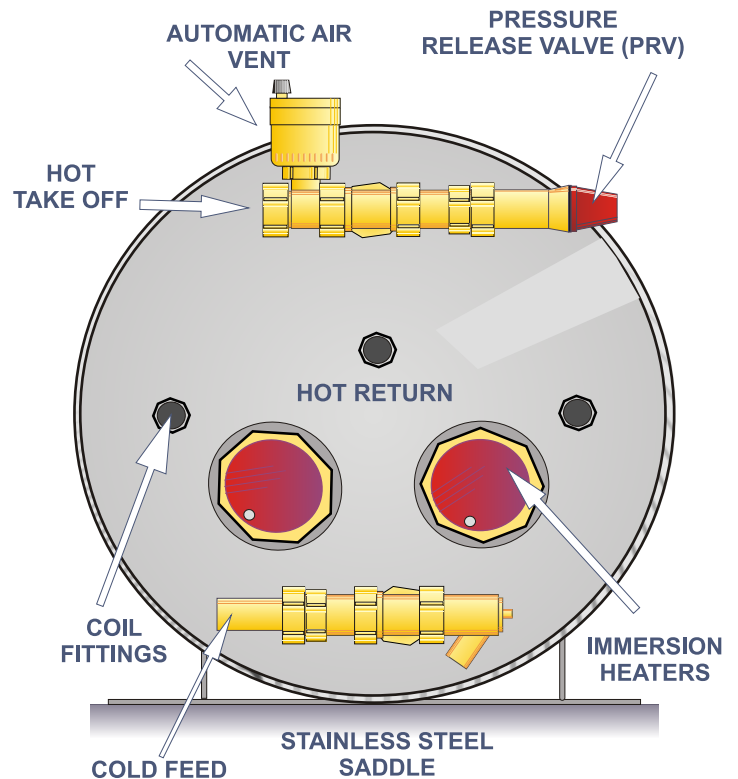

## IN THE SYSTEM

The 22 and 28mm hot water flow and return pipes circulate hot water to every outlet in the yacht for instant hot water everywhere that it is required.

Every aspect of the Surejust SuperYacht calorifier is designed for maximum efficiency and heat transfer.

Up to 9kw of energy can be produced from the two or three immersion heaters within the calorifier. The Intergron finned copper tubing also allows for maximum heat recovery. Each calorifier is pressure tested to 10 bar guaranteeing quality with every system.

## Expansion Tanks

Surejust also have a range of expansion tanks to complement the new SuperYacht calorifier range. These tanks are large enough to cope with the large quantities of water transferred in super Yachts. The tanks come in 35 litres capacity and can be fitted Both horizontally or vertically.
